

Eointec Solutions Mobile Phone Security System

Eointec Solutions is now offering small businesses and home owner's equipment which enables them to receive and respond to security alerts via their cell phone handset - while the security issue is happening. When the security issue is occurring the user has the option to view live video of the event and place a voice call into the premises, where an intruder is alerted the authorities are on their way via a PA system.

Eointec Solutions' unique product is sold as a one-off cost direct to customers. It is a more cost-efficient option than using costly 24 hour monitoring based on a yearly subscription service.

Scene 1:

A small business or home is fitted with Eointec Solutions mobile phone security unit that is connected to a video camera, microphone and speaker. An intruder enters an Eointec Solutions protected premises while occupiers are out.

Scene 2:

Eointec Solutions' security system detects the intruder either from a motion detector or Eointec Solutions built-in intelligent video analytics and an alert message is sent to a designated user's cell phone. The user can then view a live video feed of the alert to verify the alert is good.

Scene 3:

The user makes a call into Eointec Solutions unit that tells the intruder that they are detected and that the authorities are on the way.

Plug and Play Installation

Simple installation:

- 1) The unit can be placed at the back of a security monitor by unplugging the video feed from the monitor.
- 2) Plug the video feed into the unit and take the output from the unit back to the monitor.
- 3) Lastly plug in a speaker and microphone to the stereo jacks of the unit and the system is ready to go.

Simple Configuration via Phone

Simple Configuration:

- 1) On power up the unit finds its own address and the user can get this using a simple text message.
- 2) The user configures the unit for alert phone number, alert type, alert period etc., all from the phones browser.

Features

- Takes any PAL or NTSC video feed.
- Standard stereo jacks for audio input/output.
- Video Analytics.
- USB port for removable of recorded video files.
